

CSS BASIC TUTORIAL

1. CSS Color Names

In CSS, a color can be specified by using a predefined color name:

Tomato	Orange
DodgerBlue	MediumSeaGreen
Gray	SlateBlue
Violet	LightGray

2. CSS Background Color

You can set the background color for HTML elements you can use the given color above as a sample.

```
<!-- This is the BACKGROUND COLOR PART-->
<h1 style="background-color:Violet;">This the color violet.</h1>
<p style="background-color:MediumSeaGreen;">Luffy is the best captain!</p>
```

If you manage to apply and change the background color of your HEADING then you can move on to the next part!

TIP: You can also use your PICTURE as a background, just change the **COLOR** to **IMAGE**.

```
<body style="background-image:url(Yamato.jpg); background-repeat:no-repeat">
```

SAMPLE OUTPUT:

Unordered List (**ul**)

- Luffy
- Zoro
- Sanji
- Chopper

Ordered List (**ol**)

1. Luffy
2. Zoro
3. Sanji
4. Chopper

This the color violet.

Luffy is the best captain!

3. CSS Text Color

You can set the color of text too.

```
<h1 style="color:Tomato;">Wano Arc!</h1>  
<p style="color:DodgerBlue;">Is the best arc in one piece.</p>
```

SAMPLE OUTPUT:

Wano Arc!

Is the best arc in one piece.

4. Font Size

The font-size property sets the size of the text.

```
<!-- This is the FONT SIZE PART-->  
<h1 style="font-size:70px">Sky Piea Arc!</h1>
```

- You can use the “**vw**” size meaning **viewport width** this format will automatically resize your fonts base on your **browser window size**, the best way to size your text.

SAMPLE OUTPUT:

This the color violet.

Luffy is the best captain!

Wano Arc!

Is the best arc in one piece.

Sky Piea Arc!

5. CSS Alignments

There are a lot of ways to align an element. But we will stick to the basic.

```
<!-- This is the FONT SIZE PART-->  
<h1 style="font-size:70px;text-align:left">Sky Piea Arc!</h1>
```

You can use the following to move the elements around.

- Left
- Right
- Center

Here, I use the **RIGHT** alignment.

This the color violet.

Luffy is the best captain!

Wano Arc!

Is the best arc in one piece.

Sky Piea Arc!

6. CSS Padding (Shorthand Property)

The CSS padding properties are used to **generate space around an element's content**, inside of any defined borders.

```
<!-- This is the FONT SIZE PART-->  
<h1 style="font-size:70px;padding:100px">Sky Piea Arc!</h1>
```

padding: 100px;

all four paddings are 100px.

7. CSS Height and Width

The height and width properties are used to set the height and width of an element.

```
<!-- This is the FONT SIZE PART-->  
<h1 style="font-size:70px;background-  
color:red;height:200px;width:70%">Sky Piea Arc!</h1>
```

TIP: use **background-color** to mark where your height and width is.

SAMPLE OUTPUT:

The height of this is 200px and width of 70%.

Sky Piea Arc!
